PROFESSIONAL SUMMARY

Full Stack Developer with 5 years of experience building and maintaining web and mobile applications across national and international projects. Experienced in frontend engineering with React, React Native, Next.js, and TypeScript, as well as backend development, cloud infrastructure, CI/CD, and production delivery. Built Health & Lifts as an independent learning project, taking a mobile app through development, deployment, app-store release workflows, and the lifecycle of a production application; the project concluded in October 2026.

Experienced in frontend architecture, reusable components, API integration, state and server-state management, performance optimization, and design systems, alongside AWS, payment integrations, authentication, and AI APIs. Worked in English-speaking teams through technical meetings, demos, and code reviews; reviewed pull requests, mentored junior developers, and collaborated with QA and product teams.

TECHNICAL SKILLS

Frontend: React.js, React Native, Next.js, Vue.js, Angular, JavaScript, TypeScript, React Hooks, State Management, Server State Management, TanStack Query, Component Architecture, Reusable Components, Frontend Architecture, Design Systems, Responsive Design, Accessibility, Cross-browser Compatibility, Web Performance Optimization, Server-Side Rendering (SSR), Static Site Generation (SSG), API Integration, React Hook Form, Zod, Tailwind CSS, NativeWind, shadcn/ui

Backend: Node.js, Express.js, Java Spring Boot, Prisma, TSOA/OpenAPI, GraphQL, Python

Cloud & DevOps: AWS (Cognito, Aurora PostgreSQL, Lambda, S3, KMS, Route 53, IAM, CloudWatch, Rekognition), Terraform, Docker, GitHub Actions, Expo EAS, AWS Amplify, Vercel

Databases: PostgreSQL, Aurora PostgreSQL, Prisma

AI: OpenAI, Claude, Cursor, Graphify, AI-assisted software engineering, Lovable, Claude Design

Payments & Integrations: Stripe, Stripe Connect, RevenueCat, Google Play Billing, Resend, OpenAI API, Open Food Facts, USDA FoodData Central, AWS Rekognition

Tools: GitHub, GitHub Actions, AWS, Vercel, AWS Amplify, Expo EAS, Railway, Swagger/OpenAPI, Figma, Adobe XD

Testing & Engineering: Playwright, React Testing Library, Jest, Unit Testing, Integration Testing, End-to-End Testing, REST APIs, CI/CD, Feature Flags, Admin Dashboards, SSE, JWT Authentication, Clean Code, Agile (Scrum/Kanban)

Languages: Advanced English (meetings, writing, reading), Portuguese

MY OWN PROJECTS

Health & Lifts – Founder & Full Stack Developer | *Dec/2025 - Oct/2026*

Built and operated an AI-powered fitness platform for personal trainers and students as an independent learning project, using the full lifecycle of a real mobile product to practice development, deployment, store release workflows, and production operations. Project concluded in October 2026.

- Built the complete platform from scratch using React Native, Next.js, Express, PostgreSQL, and AWS, creating reusable React components and scalable frontend architecture;

- Designed a fully configurable Admin Console (feature flags, subscription management, user administration, support tickets, email configuration, promotional campaigns, business settings) with a Feature Flag architecture to enable/disable screens and logic without new deployments;
- Developed AI-powered training and nutrition features using OpenAI GPT models, embeddings, and RAG;
- Integrated Stripe subscriptions, Stripe Connect payouts, RevenueCat and Google Play Billing in-app purchases; published and managed production releases through Google Play Console (Internal, Closed, and Production Testing);
- Designed AWS cloud infrastructure (Cognito, Aurora PostgreSQL, Lambda, S3, KMS, Route 53, Secrets Manager, CloudWatch) and CI/CD pipelines (GitHub Actions, Terraform, Expo);
- Implemented secure authentication with AWS Cognito, MFA, JWT, secure token storage, and AWS Rekognition Face Liveness;
- Developed barcode scanning, nutrition tracking, progressive workout evolution, AI photo moderation, hydration and cardio tracking, and food search using TACO, USDA, and Open Food Facts;
- Implemented transactional email and marketing campaigns via Resend; used Graphify and Claude Context Engineering workflows to improve AI-assisted development, reducing token usage while increasing context quality.

PROFESSIONAL EXPERIENCE

Volta Health (USA) – Full Stack Developer | Full-time, Remote | *Feb/2025 - Present*

- Maintained and developed features for a university healthcare management system as part of an 8-member engineering team;
- Built a CMS-1500 PDF form with copy/print protection for the Insurance Billing product;
- Developed a Digital Health Network Card for mobile use;
- Built a Figma API webhook integration that automatically updated and deployed frontend design tokens whenever designers changed the source Figma file, keeping the design system synchronized without manual updates;
- Implemented TanStack Query for the Immunizations module's student and immunization table, enabling near-instant navigation to previously visited pages through cached server state and adding query invalidation at relevant data-update points to keep data fresh;
- Optimized the Express backend powering the Immunizations table by removing obsolete calls and quadratic-time nested-loop processing ($O(n^2)$); reduced loading time for 1,000 students from 54 seconds to 0.2 seconds, a 99.6% reduction in load time, or approximately 270× faster;
- Created a Storybook design-system project and centralized shared frontend components from multiple projects, establishing a single source of truth for reusable UI components.
- Developed and maintained frontend features using React and React Native and backend services using Express and Prisma; collaborated daily in English through technical meetings, demos, and code reviews.

Multiplica Crédito & Investimento – Frontend Developer | Full-time, Remote | *Aug/2024 – Feb/2025*

- Developed fintech interfaces using React.js, collaborating with a 10-member dev team, including an operational spreadsheet for managing monetary values with adjustments for Brazilian taxes over a given period;
- Reviewed PRs and supported junior developers, ensuring clean, readable code.

Grupo Irrah – Plug Chat – Full Stack Developer | Full-time, Remote | *Sep/2023 – Aug/2024*

- Built an automated IVR system (Next.js + TypeScript + Firebase) with triage logic to route customers to agents/departments;
- Developed the second version of the chat system with support for images, video, audio, documents, and location sharing, with backend in Java Spring Boot + Docker.

Astus – Frontend Developer | Full-time, Remote | *Sep/2022 – Sep/2023*

- Led full development of the Astus mobile app (Android & iOS) using React Native + TypeScript with a Spring Boot backend;
- Implemented a custom video player, PDF/image viewer, quizzes, and educational resources;

- Designed the app's UI in Figma from scratch and translated the designs into production-ready React Native screens for Android and iOS.

EDUCATION

IFPR – Federal Institute of Paraná

- Technical Degree in Computer Science (2017 – 2021);
- Bachelor of Technology in Systems Analysis and Development (2023 – ongoing);
- Complementary Courses: Udemy, Origamid (React.js, TypeScript, Frontend Architecture, UI/UX).
